

Don't have a
GREEN thumb?

We've got the
PERFECT PLANT
for you!

Pick up a craft kit on
June 1st @ 6pm

First come, first served.
Two kits per person.
Kits are checked out
under your
library account.

WINE CORK WATERING CAN INSTRUCTIONS:

1. Take a knife or scissors and carefully twist down into the center/fat end of your cork. (Take your time. You don't want it to crack.)

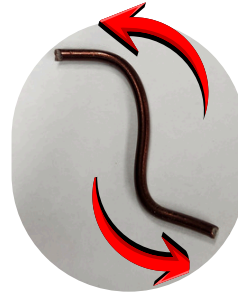

Make it just wide/deep enough for your plant to tuck into.

2. Using a pliers or your fingers, bend the short wire to a U shape.

3. Using a pliers or your fingers, bend the long wire to a backwards S shape.

4. With the hole on top, gently push your U shape wire into the center/side of the cork to make a handle.

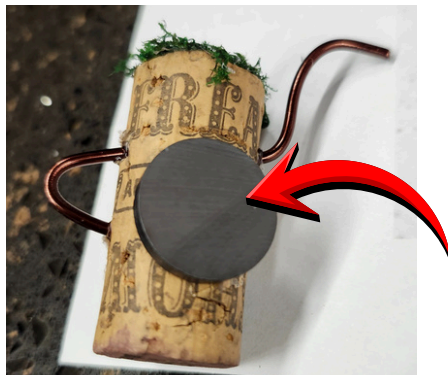

5. Next, gently push the S shaped wire into the other side of the cork.

6. Take your wires out and add glue (not included) to the holes you made and then place the spout and handle back in the holes. Let dry.

7. Glue (not included) some moss around the top of the hole.

8. Glue the magnet to the center/back of your cork.

9. When everything is dry, push your air plant into the hole on top and put on your fridge Enjoy!

Caring for Your Air Plants

1. A 20-30 minute weekly soak is recommended for most air plant species with supplemental misting as needed.
2. After watering, make sure the air plants have enough light and air circulation to dry within a few hours. Although air plants thrive in containers, it's advisable not to showcase them in enclosed ones. It's important to ensure they are completely dry before placing them back in a container that might limit air circulation.
3. Give them bright, indirect sunlight or consistent full-spectrum fluorescent home or office lighting.
4. Protect them from frosts as air plants prefer warm conditions between 50-90 degrees Fahrenheit. If you are growing them indoors and the air is dry, you will need to submerge the plant in water about 7-10 days and mist them every few days between soaks.
5. Never plant air plants in soil!
6. Fertilizing monthly will help promote blooms and pups and will give your air plants the nutrients they need to thrive.

WINE CORK WATERING CAN

Supply list

- 1 cork
- 2 wires
- 1 big pinch of moss (enough to cover the top edge of the cork. Like the picture)
- 1 small air plant
- 1 magnet
